

## EOSPren – supplement to LIGUM offer

Officially at LIGNA 2019, we have completed the development phase of EOS sleeves, which has now become a standard for many leading manufacturers in the wood industry and has radically changed the approach to maintaining production lines in continuous operation.

### EOS Sleeves' success is thanks to:

- application of cylinder size standardisation for the most popular machines on the market: BURKLE, GIARDINA, SORBINI, SUPERFICI, HYMMEN, BARBERAN and many other less popular ones.
- Constantly maintained quantities of ready-to-work sleeves: EPDM for UV varnishing in the hardness range of 20-50 ShA; with sponge coatings for staining with porosity from BY1L to BY3L and BY2N-BY4N for oiling.
- rubber coatings enriched with CroCut cuts – a unique system of cuts called Opti/Rilli for use in painting high-quality components, including for applying high gloss varnish.
- Hybrid-Roller – a combination of a sponge structure with a uniform rubber coating – ideal for painting 3D elements.
- The unprecedented service life of rubber coatings through the use of an innovative extrusion process.

EOS  
sleeves

These are undoubted advantages that gave u san advantage over the competition and contributed to the dynamic development of the EOS Sleeves system.

However, the expansion of the LIGUM-Westland concern is not over yet. In active collaboration with ASMA Polska – a producer of polyurethane coatings – the EOS system has been enriched with a product line from PREN.

After months of testing , a technology of polyurethane coating for UV varnishing was developed, available in the EOS sleeves system under the name **EOSPren**. Hardness variants available at the moment are : 15 ShA – 50 ShA. If interested, we are able to develop new formulas. **Ask for an offer today! \***

**EOSPREN sleeves** PU i EOS sleeves is a recipe for SUCCESS!

To sum up, EOS sleeves is **not a product, but an entire system** that brings unquestionable organisational and economic benefits throughout the entire enterprise. And thanks to the new PU property, it is almost perfect.

**\*LIGUM POL Sp. z o.o. is the sole distributor of the EOSPren system on the market**
